Dairy-Herd-Improvement-Association Letter

ARS-52-23  
Vol. 31, No. 12

December 1955

**ONLY "CENTERED" RECORDS ACCEPTED ON DHIA 718'S  
AFTER JANUARY 1, 1956**

To further improve the reliability of DHIA proved-sire records and to comply with the recommendations of the American Dairy Science Association and the Work Conference Group advising the Dairy Husbandry Research Branch on the DHIA and Sire-Proving Programs, only DHIA records calculated by the centering-day method will be accepted for use in proving DHIA sires after January 1, 1956.

DHIA supervisors shall report 305-day lactation records (718's) only from those herds where all records are calculated by the centering-day method.

DHIA supervisors must also comply with the rule of varying the actual testing day around the established centering day for each tested herd, but shall not vary the actual testing day more than 3 days before or 3 days after the established centering-day for each herd.

**DHIA SUPERVISOR REPORTS (780's and 718's)**

1. Report herd total data on form DHIA-780 for every herd tested.
  - a. Report the herd code number of the herd. Report complete feed data as well as production and cost data. Carefully check all data reported.
2. Report a lactation record on form DHIA-718 for every cow tested.
  - a. Report all complete and also all incomplete lactation records up to 305 days. Short-time incomplete records shall be reported for any number of days. Mark the incomplete records as: sold, died, etc.
  - b. Include the herd code number on each 718 report.
  - c. After filling out a 718 record report, recheck the data reported with the original data in the DHIA Herd Record Book. The 718 report must be completely and accurately filled out if full use is to be made of it in proving sires.

DHIA PROVED-SIRE RECORDS TABULATED IN NOVEMBER 1955

Following is a list of 241 sires whose records were tabulated or retabulated by the Dairy Husbandry Research Branch in November 1955. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i. e., \*12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i. e., \*May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

Proved-sire records consisting of fewer than 25 comparisons with daughters resulting from artificial breeding are indicated as "preliminary AB proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire record.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
